

# Focus on Lecture Content

**Date:** 2022-04-14

**Status:** Accepted

---

## Context

We are taking a course on event-driven and process-oriented architectures. With this assignment our task is to implement the concepts of the lectures.

## Decision

With our implementation we focus on the implementation of the lectures' concepts and see the rest of our implementation only as support to that end.

## Consequences

Minimal effort is put into business logic implementation (e.g., customer approval checks whether the zip-code starts with 9). Error handling and prevention is only done to an extent that covers lecture topics.
